European Reference Networks (ERNs) diagnose and treat rare or low-prevalence complex diseases and conditions across national borders. Healthcare providers within the EU/EEA and Ukraine can share patient cases within and across ERNs using a secure web-based tool known as the Clinical Patient Management System (CPMS 2.0), and multidisciplinary teams of experts can diagnose and suggest treatment or surgery and provide post-operative and transitional support.

Compatible with most common electronic devices

Secure upload and exchange of pseudonymised patient data
